                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               임
                                                                                                                                            P. gingivalis W12 cysteine protease, porphypain (AAR86029), was identified as the product of the prtP gene (AAT30653) isolated from P. gingivalis W12 genomic DNA. The porphypain shows homology to the haemagglutinins (see also AAR86026-28 and AAR86030-33) of P. gingivalis 18. It can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of a live vaccine. The porphypain and haemagglutinins can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. ```

New antigenic protein complex from Porphyromonas gingivalis - comprising Arg- and Lys- specific thiol endo-peptidase(s), used in the detection, prevention and treatment of periodontal disease. WPI; 1997-272112/24. N-PSDB; AAT78851.

Example 1; Fig 9b; 68pp; English.

Comprises a 300 kDa complex composed a 48 kDa lysine-specific thiol protesses and 39, 15 and 44 kDa adhesins encoded by the prtK gene (AAT78851), and a 45 kDa adhesins encoded by the prtK gene (AAT78851), and a 45 kDa adresins encoded by the prtK gene (AAT78851), and a 45 kDa adresins encoded by the prtK gene (AAT78850). A claimed antigenic complex comprises at least one multimeric protein complex deving a mol.wt. of over 200 kDa, and preferably comprises all 9 proteins of the PrtR-PrtK complex (see also AAW2480-85). It can be used in a claimed composition to elicit an immune response directed against 66, and in a claimed method of reducing the prospect of PG infection and/or severity of disease. Antibodies directed against the complex are claimed for use in treating PG infection. Unlike whole PG cells or other previously prepared antigens based on fimbriae or the capsule, the PrtR-PrtK complex or component parts are safe and effective antigens. (Updated on 17-0CT-2003 to standardise OS field)

                                                                                                                                                                                            This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the prtP haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

(UYFL ) UNIV FLORIDA. (UABR-) UAB RES FOUND

P. gingivalis 381 haemagglutinin hagD (AAR96032) was identified as the

Claim 5; Page 125-129; 153pp; English.

product of the second open reading frame of the hagb gene (AAT30655) derived from P. gingivalis 318 genomic DNA. A first open reading frame coded for hagb protease (see also AAR96031). The protease and haemagglutinin can be obtd. from transformed host cells and used in vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of live vaccines. The haemagglutinin and protease can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagD haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

AAQ88141 encodes AAR72458 the Porphyromonas gingivalis lysine-gingipain protein complex (LGPC). The LGPC has amidolytic and proteolytic specificity for an amide bond, where lysine contributes the carboxyl gp., i.e. a lysine specific protease. LGPC can be used to identify agents that modulate the effect of LGPC on animals, and also for monitoring the exposure of an animal to LGPC. Such a method can be used to monitor the progress of a therapy designed to lessen the symptoms of periodontitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                      P. gingivalis 381 haemagglutinin hagD (AAR96028) was identified as the product of a gene (AAR3662) isolated from a P. gingivalis 318 genomic library. The haemagglutinin (see also AAR96032) can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows produce of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise
                                                           Porphyromonas gingivalis genes and proteins - used in the detection and vaccination against periodontal disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               182 VIPGGVYDYCITNPEPASGKMATAGDGDNQPARYDDFTFEAGKKYTFTMRRAGMGDGTDM

This sequence represents the hagD haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   encoding haemagglutinin and/or

```

Example 1; Fig 8b; 68pp; English.

```
comprises a 300 kDa complex composed a 45 kDa arginivalis (PG)
comprises a 300 kDa complex composed a 45 kDa arginine-specific thiol
comprises a 300 kDa complex composed a 45 kDa arginine-specific thiol
corresponding to the triangle of the triangle of the triangle of the triangle of the triangle of the triangle of the triangle of the triangle of the triangle of the triangle of the prick complex comprises at least one multimeric protein complex that and prick containing at least one adhesin domain, the complex having a mol.wt. of over 200 kDa, and preferably comprises all 9 proteins of the PrtR-PrtK complex (see also AAW24780-85). It can be used to a claimed composition to alicit an immune response directed against C PG, and in a claimed method of reducing the prospect of PG infection and/or severity of disease. Antibodies directed against the complex are claimed for use in treating PG infection. Unlike whole PG cells or other previously prepared antigens based on fimbriae or the capsule, the PttR-PttK complex or component parts are safe and effective antigens.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    117 SEKLMPHOPSMSKSDDPEKVPFVYNAAAYARKGFVGQELTQVEMLGTMRGVRIAALTINP 176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a Porphyromonas gingivalis arginine-specific proteinase known as Arg-gingipain/gingipain-2 amino acid sequence. Gingipain-2 consists or a 50kD protease component non-covalently associated with a 44kD haemagqlutinin component. The proteinase is stimulated by glycine containing peptides and glycine analogues. It is inhibited by cysteine protease group specific inhibitors. The protease propaganic compositions and vaccines against inflammatory response and tissue damage caused by P. gingivalis in periodontal disease. It can also be used to screen for agents that modulate Arg-gingipain proteinase activity inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The invention relates to a recombinant DNA molecule encoding high molecular weight (mature) Arg-gingipain (AG) protein, which has an enzymatically active protease component (AG-2) and a haemagglutinin component, from P. gingivalis. The nucleic acid is useful for producing mature Arg-gingipain protein. Immunogenic compositions comprising Argingipain are useful for immunising animals including humans against inflammatory response and tissue damage caused by an archaebacterium Porphyromonas gingivalis, which causes progressive periodontitis. Argingipain is also useful for identifying agents that modulate Argingipain proteinase activity, whether by acting on the protein in the gingipain protein as a such as complement factors C3 or C5. The present sequence New recombinant DNA molecule which encodes high molecular weight (mature) Arg-gingipain protein, useful for immunization against inflammation and tissue damage, comprises enzymatically active protease component and Claim 1; Col 29-41; 56pp; English. hemaglutinin component is Arg-gingipain-2 Sequence 1704 AA;

                                        A low mol.wt. arginine-specific gingipain (AG-1) and high mol.wt. AG (AG-2) were isolated from P. gingivalis strains H66 (ATCC 33277) and W50 (AG-KTCC 59373). The sequences of the proteins were used to design PCR primers and probes to isolate AG DNA. Lambda DASH and lambda ZAP libraries were screened with a probe based on amino acids 11-22 of the AG protein to obtain DNA encoding AG-1 (AAQ08484) and AG-2 (AAQ08489). AG-2 correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          282

The present sequence represents an arginine-specific protease of Porphyromonas gingivalis. The following peptides, derived from Argand Psys-specific high molecular weight proteases, offer protection against infection: YTTYTYRDGK IKEGITATE DOGWATGHIB YCVEKTRAGS VBFWCK (I); YTPVEEKQNG RMIVIVAKKY (II); QLPFIFDVAC VNGDFLFSMP CFAEAMRAQ (III); YTPVEEKQNG RMIVIVAKKY (II); GNBEYCVERK YTAGVSPKVC KDVTV (V); RAEBPRYGORY TITAGORY TITAGORY TITAGORY THAGAFDTY RNEMNYEDGR (VII); DYTYTYTNG TKIKEGITAT TEREDGVATG NMEYCVCVKY TAGVSPKVC (VIII); NTYTVYRDGT KIKEGITATFE EDGG (IX); RAGGATLAGT FEBEDGVATG NMEYCVCVKY TAGVSPKVC (VIII); NTYTVYRDGT KIKEGITATFF EDGG (IX); RIGGATATF FEBEDGVATGH HEY (XII); CANDANGTPN NPNN PORTITISE (XII); and YTPVEEKENG RMIVIVAKKY (XIII). They are used in vaccines to protect animals, including humans, from gingivitis and/or periodontal diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          47;

This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagE haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

                                                                                                                                                                                                                               P. gingivalis 381 haemagglutinin hagE (AAR96033) was identified as the product of a gene (AAT30656) identified in P. gingivalis 318 genomic DNA. The haemagglutinin can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

Dypothetical protein slr0408 - Synechocystis sp. (strain PCC 6803)
C;Species: Synechocystis sp.
C;Species: Synechocystis sp.
C;Species: CCC 6803
C;Date: 25-Apr-1997 #text_change 20-Jun-2000
C;Accession: S76412
E;Kaneko, T.; Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; Miyajima, N.; Okumura, S.; Shimpo, S.; Takeuchi, C.; Wada, T.; Matanabe, A.; Yamada, M.; Yasudā DNA Res. 3, 109-136, 1996
A;Title: Sequence analysis of the genome of the unicellular cyanobacterium Synechocystis A. Reference number: S74322; MUID:97061201; PMID:8905231
A. Accession: S76412
A. Status: preliminary
A. Molecule type: DNA
A. Molecule: 1-4199 < KAN>
A. Residues: 1-4199 < KAN>
A. Molecule: BRHEL:D90915; GB:AB001339; NID:g1653604; PIDN:BAA18541.1; PID:g16536; A. Note: the nucleotide sequence was submitted to the EMBL Data Library, June 1996

ENZYME REGULATION: Requires cysteine for activation and Ca(2+) and/Or Mg(2+) for stabilization. It is stimulated by glycine-containing dipeptides. It is resistant to inhibition by proteinase inhuman plasma.

SIMILARITY: Belongs to peptidase family C25.
                                                                                                                                                                                                                                                                                                                                                               584 PDGVEDVIVQKPHILIVVGKIIIVSWQGEAMIYDMNGRRLAAGRNIVVYTAQGGYYAVWV

"Purification and characterization of a 50-kDa cysteine proteinase
(gingipain) from Porphyromonas gingivalis.";
J. Biol. Chem. 267:18896-18901 (1992).

-I-FUNCTION: Thiol protease which is believed to participate in
intracellular degradation and turnover of proteins. Its
proteolyptic activity is a major factor in both periodoncal tissue
destruction and in bacterial host defense mechanisms. Activates
complement C3 and C5.

-I-CATALYTIC ACTIVITY: Cleavage of proteins, including collagens and
imminoglobulins, with a preference for Arg in P1, and hydrophobic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CPGI_PORGI STANDARD; PRT; 991 AA.
